Release Version	ICEFLO 4.7
Release Date:	25/09/2018
Date Approved:	11/09/2018
Approved By:	Jackie Smith

Release Note

The content of this release note relates to new features, enhancements and bug fixes in ICEFLO for Mobile (M) and Enterprise (E) editions. These are defined in the tables below:

New Features

The following table defines the features which have been introduced as part of this release:

ID	Title	Description	M	E
1.	Auto Refresh option for Dynamic Updates	We have introduced the feature to turn off Dynamic Updates to Tasks Lists, so that refreshes are not happening when constructing and editing Tasks. See our What's New documentation for more details.		✓
2.	Replaced Any Gantt with Jet Chart	We have replaced Any Gantt charts with Jet Charts, which will enable us to add more features to these visualisations in the future.		✓

Enhancements

The following table defines the features which have been enhanced as part of this release:

ID	Title	Description	M	E
1.	New details added to Checkpoint Status Reports	We have introduced two new columns to the Checkpoint Status Report, to highlight Stage state and Progress. See our What's New documentation for more details.		✓
2.	% Complete Visualisation on task status	We have added the % Complete on the Task status visualisation on Lists Tasks. See our What's New documentation for more details.		✓
3.	Import screen has had additional information added relating to special characters	We have added some additional information and advice regarding the Import of files with some special characters. See our What's New documentation for more details.		✓
4.	Oracle APEX Upgrade to v18	We have deployed the Oracle Apex Upgraded to version 18, which will enable us to use any new Apex functionality for ICEFLO enhancements.		✓

5.	Delayed Milestone Start Report added to the Default Reports	A Delayed Milestone Start Report has been added to our default reports in List Tasks for Runbooks and Events. See our What's New documentation for more details.		✓
6.	Information on the ICEFLO Status Page	We have added details of how to subscribe to our ICEFLO Status page for updates and alerts, in welcome emails sent to all new Users.		✓

Bug Fixes

The following table defines the bugs which have been fixed as part of this release:

ID	Title	Description	M	E
1.	Resolution Time for Issues showing negative numbers	On some occasions, the incorrect Resolution Time of an Issue was presenting. All scenarios for this have been resolved.		✓
2.	Event Critical Path displaying incorrect information	When Tasks were being moved from an Imp Stage to a Post Imp Stage, for example, the Critical Path "Y" indicator was not being removed.		✓
3.	Incorrect ordering of Notes on an Issue	Ordering of Notes on an Issue was not taking the Issue date into consideration.		✓
4.	Create User Issue	On creating a new User and going back in the create wizard to change authorisation levels, some of the checkboxes were remaining ticked and could not be unchecked.		✓
5.	Multi Page function on large Task list data sets.	When using multi-page function on large Task Lists the screen was occasionally reverting to previous a page selection.		✓
6.	Breaking of Dependencies on move Task recorded incorrectly	On breaking Dependencies on move Task, the detail was not being recorded correctly or at all in the Activity Panel.		✓
7.	Add Note Issue	Adding a note to a new Task in a new Runbook was giving an error.		✓
8.	Cards View Tool Tip	On the Card view the tooltip hover over was displaying Edit rather than Cards.		✓
9.	Several Dictionary enabled titles showing default ICEFLO names	Several titles throughout ICEFLO were still displaying default names rather than the new selected Dictionary enabled titles. These have all been fixed.		✓
10.	Permissions issues with Create User, Clone User and Maintain User	For Create, Clone and Maintain User, the Issue Manager and User Manager Check Boxes were being enabled for Participant authorisation level users.		✓

11.	Move Task with BO Trigger issue	Moving a Task with a BO Trigger from the Pre or Imp Phase to a Post Imp phase was removing any BO triggers applied.		✓
12.	Prevent importing of special characters in Stage and Task titles	Because of the change to disallow some special characters in Task or Stage titles, we have now disallowed the Import of such characters in these fields. The special characters will be removed on Import. The Import screen has been enhanced with additional information to advise on this.		✓
13.	Issues on float over of maximised screen	The maximise screen feature has been disabled for IE due to issues. Some float overs on maximise are still not showing for other browsers.		✓
14.	Runbook and Event Dashboards - Charts	In some cases, when launching the Dashboard for Runbooks or Events, no data was showing in the Charts on initial load.		✓
15.	Delete Stage not auto refreshing in Edit mode	On deleting a Stage in Edit, the changes were being saved but the Stage remained. The auto refresh after actioning "Delete" will now delete the Stage.		✓
